Spanish ●●●●●

English ●●●●○

// PROFILE

AI Engineer with more than a decade of experience building software, machine learning and agentic AI systems. I started as a software developer, moved into data science, and today I design multi-agent architectures, MCP integrations and LLM workflows that run in production. I enjoy learning something new every day, applying it to challenging problems and sharing what I learn with others.

// EXPERIENCE

AI Engineer

Aug 2026 – Present

Softtek · AI Center of Excellence (CoE)

- Lead the agentic AI track of the CoE, defining the reference agent architecture reused across client engagements and internal initiatives.
- Built the MCP server that exposes Oracle HCM entities and operations to agents, giving agentic workflows a governed tool contract over client HR data.
- Designed and built agentic workflows for a retail solution and a bank customer-onboarding journey, grounding agent decisions in master data through an MCP server over Stibo STEP (MDM).
- Built LLM pipelines that derive business ontologies and decision models from unstructured documents, codifying domain knowledge so agents reason over business rules instead of raw text.
- Reworked the job-profile taxonomy to reflect AI-driven role transformation, aligning skills and competency definitions with the CoE's agentic operating model.
- Benchmarked Google Gemini, open-source (served locally with Ollama) and Anthropic Claude (via Bedrock) models against the CoE's recurring use cases to select the best-fit model per workload.

`// LangGraph · LangChain · DeepAgents · Google ADK · MCP · Stibo STEP (MDM) · Oracle HCM · Ollama · Amazon Bedrock · Gemini · Claude`

Data Science Manager

Jun 2025 – Aug 2026

PwC · Artificial Intelligence Engineering

- Lead the design and implementation of a multi-agent orchestrator (LangGraph + FastAPI + Celery) with A2A protocol, MCP tool servers, RAG-based use case discovery (Azure AI Search) and observability (Langfuse/DDTrace); deployed on Kubernetes and provisioned with Terraform.
- Built a domain-specific PM agent on the DeepAgents framework with YAML-driven skill registry, subagent delegation and interrupt/resume semantics.
- Evaluated and integrated multiple LLM providers through LangChain (OpenAI GPT-4/5, Anthropic Claude, Google Gemini 2.5/3, Meta LLaMA 3.2/4, Mistral) to select the best-fit model per use case.
- Collaborated in the development of the TypeScript front-end that consumes the agent orchestrator's outputs.

// EDUCATION

MIT Professional Education
Applied Data Science Program
Jan 2023 — May 2023

Universidad IEXE
MSc Applied Data Science
2020 — 2022

Tecnológico de Monterrey
Data Science for Business Diploma
Jun 2021 — Nov 2021

Centro de Enseñanza Técnica Industrial
BEng Mechatronics
2009 — 2013

Centro de Enseñanza Técnica Industrial
Technologist in IT
2005 — 2009

// CERTIFICATIONS

- ✓ Azure Data Scientist Associate
  Microsoft · 2024 — 2026
- ✓ AWS Solutions Architect – Associate
  Amazon · 2022 — 2025
- ✓ Azure Fundamentals
  Microsoft · 2021
- ✓ Applied Data Science with Python
  IBM · 2020
- ✓ Exam 483: Programming in C#
  Microsoft · 2017
- ✓ Talent Land 2023 — Speaker
  2023

// EXPERIENCE · CONTINUED

Senior Associate Data Scientist
Dec 2023 — Jun 2025

PwC · Innovation Hub — AI

- Built a multi-knowledge-base RAG system (SharePoint → Azure Storage → FAISS/PromptFlow) and NLP pipelines: PII/PHI detection (Presidio + BERT NER) and topic modeling (BERTopic on Databricks).
- Contributed to a multi-agent orchestrator (AWS Multi-Agent Orchestrator + Lex bots) routing across multiple LLM providers (OpenAI GPT, Anthropic Claude, Google Gemini, Meta LLaMA via Bedrock); fine-tuned a LLaMA model (SFT) for latency-sensitive routing.
- Built RAG pipelines for risk/contract analysis using Azure Document Intelligence, LangChain markdown chunking and Azure AI Search, orchestrating multi-step contract review with CrewAI.

`// RAG · Azure AI Search · Document Intelligence · LangChain · CrewAI · Presidio · Databricks · Bedrock`

Data Science
Jun 2022 — Dec 2023

CONTPAQi · Technology dept.

- Developed an income-forecasting ensemble (ARIMA, time-series XGBoost, DeepAR) with AWS Glue ETLs, SageMaker pipelines and a TypeScript-based Amplify UX for consuming forecasts.
- Built customer churn and lead-scoring models with techniques for imbalanced data and automated training/deployment using SageMaker; Streamlit-based interfaces.
- Implemented a cognitive FAQ/Search solution with Amazon Kendra.
- Contributed to the architecture of a hybrid AWS–Azure Enterprise Data Lake using event-driven routing (AWS Kinesis).

`// ARIMA · XGBoost · DeepAR · AWS Glue · SageMaker · Amplify · Streamlit · Kendra · Kinesis`

Data Engineering
Oct 2021 — Jun 2022

CONTPAQi · Artificial Intelligence dept.

- Designed automated ETL pipelines with AWS Glue, Athena and PySpark.
- Migrated text-similarity processes to scalable PySpark workflows.

Software Architect
Apr 2018 — Oct 2021

CONTPAQi · Web Development dept.

- Designed reusable microservices on ASP.NET Core and validated gRPC with Go as a proof of concept for service-to-service communication, as an alternative to REST.

Software Engineer
Jul 2015 — Apr 2018

CONTPAQi · Web Development dept.

- Built ASP.NET Web APIs and web apps for the CONTPAQi Cloud platform.

DW Software
Jul 2013 — Jul 2015

Custom software development

- Customized software and web development with ASP.NET.
